PROFESSIONAL SUMMARY

BSc (Hons) Information Technology undergraduate specialising in Cybersecurity at SLIIT, Kandy (third year, expected graduation 2028). Hands-on experience in vulnerability assessment, network traffic analysis and access control validation using Nmap, Nessus, Wireshark, Burp Suite and Metasploit in virtual lab environments. Built a concurrent TCP server in C and Python with session management, account lockout and audit logging. Ranked 25th of 76 teams in the ICTS CTF 2026 and 1st in the TryHackMe Gold League. Working knowledge of NIST CSF, ISO/IEC 27001 and PCI DSS. Seeking an internship or entry-level role in cybersecurity or information security where I can apply technical risk assessment skills and keep learning.

EDUCATION

BSc (Hons) in Information Technology, Specialising in Cybersecurity Expected graduation: 2028
Sri Lanka Institute of Information Technology (SLIIT), Kandy | Currently in 3rd year, 1st semester

GCE Advanced Level, K/Madeena National College (2021 – 2023)

GCE Ordinary Level, Hill Country International Girls College (2020)

TECHNICAL SKILLS

Security Tools: Wireshark, Nmap, Nessus, Qualys, Metasploit, Burp Suite

Security Practice: Vulnerability assessment, technical risk assessment, network traffic analysis, asset discovery, access control validation, audit logging, security documentation, OWASP Top 10

CTF Disciplines: OSINT, web penetration testing, reverse engineering, malware analysis, digital forensics

Frameworks and Standards: NIST CSF, ISO/IEC 27001 (foundation level), PCI DSS, SOX (familiarity)

Programming: C, Python

Operating Systems and Virtualisation: Kali Linux, Parrot OS, Ubuntu, Oracle VirtualBox, VMware Workstation Pro

Practice Platforms and Tools: TryHackMe, Hack The Box, Metasploitable2, GitHub

Languages: English, Sinhala, Tamil (all fluent)

PROJECTS AND RESEARCH

Vulnerability Assessment and Control Verification Lab Kali Linux, Metasploitable2

- **Risk identification:** Ran systematic technical risk assessments against Metasploitable2 target systems from a Kali Linux environment, identifying misconfigurations.
- **Vulnerability mapping:** Evaluated and documented system exposures, mapped findings to the OWASP Top 10 and proposed remediation steps.

Secure Multiprocess TCP Server with IAM Controls and Audit Logging C, Python

- **Design and implementation:** Developed a concurrent client-server application with a custom protocol, session management and identity and access management (IAM) controls.
- **Brute-force protection:** Implemented automatic account lockout after three consecutive failed login attempts, applying NIST access control guidance to mitigate dictionary and brute-force attacks.
- **Audit logging:** Built persistent, chronological logging of client IP addresses, process IDs, executed commands and server responses to support audit traceability.

- **Resource handling:** Wrote signal handlers that reap child processes with waitpid, preventing zombie processes and keeping the server stable.

Advanced Deception Technology Research and Lab Design Honeypots, honey-files, honeytokens

- **Deception architecture:** Researched and designed deployment strategies for honeypots, honey-files and honeytokens to misdirect attackers and detect lateral movement inside a network.
- **Threat detection:** Analysed how deception technologies support early threat identification and incident response within a SOC framework.

Velvet Shark Studio: Cybersecurity Portfolio and Blog Technical writing

- **Technical write-ups:** Publish step-by-step CTF solutions and lab configuration guides, turning vulnerabilities into clear, actionable documentation.

CAPTURE THE FLAG COMPETITIONS

- **ICTS CTF 2026:** Placed 25th of 76 teams and advanced to Phase 3. Challenges covered OSINT, web penetration testing and reverse engineering.
- **Battle of the Multiverse '26 (International):** Competed in a 24-hour event covering malware analysis, digital forensics and full-pwn scenarios.
- **TryHackMe:** Placed 1st in the Gold League, after placing 1st in the Silver League.
- **CyberShield 5.0:** Placed 4th among 15 teams at the finale.

CERTIFICATIONS AND TRAINING

- **ISC2 Certified in Cybersecurity (CC)** – Candidate
- **Qualys** – Vulnerability Management Foundations
- **Palo Alto Networks** – Security Operations Fundamentals
- **Cisco** – Introduction to Cybersecurity
- **TryHackMe** – Pre-Security Path; Love at First Breach
- **SysCare IT Solutions** – Cybersecurity Webinar (Ethical Hacking Fundamentals)

LEADERSHIP AND ACTIVITIES

AIESEC in SLIIT Kandy March 2026 – Present

- **Team Leader, OGT CXP** (since July 2026); member of the Outgoing Global Talent department since March 2026.

School Leadership and Media Madina National School

- **Senior Prefect:** Managed student discipline and logistics for large school events.
- **Head of Script Writing, Media Unit, and Sports Union Co-ordinator:** Public speaking and script writing.
